

## Common Errors

During the process of uploading diamond poems using OCR, users may encounter several common errors. It's important to anticipate these errors and provide effective solutions to handle them. Here are some of the most common errors:

### FILE FORMAT NOT SUPPORTED

The user may try to upload a diamond poem in a file format that is not supported by the OCR system. In this case, it's important to provide clear instructions on the supported file formats and suggest alternative ways to convert the file to a supported format.

### POOR IMAGE QUALITY

If the image quality of the diamond poem is poor, the OCR system may not be able to accurately recognize the text. It's important to educate users about the importance of high-quality images and provide tips on how to improve the image quality, such as using proper lighting and avoiding blurry images.

### TEXT RECOGNITION ERRORS

The OCR system may not be able to accurately recognize the text in the diamond poem, resulting in errors or missing content. It's important to inform users about the limitations of OCR technology and provide instructions on how to manually correct any errors or missing text.

### SLOW PROCESSING TIME

If the OCR system takes a long time to process the uploaded diamond poem, users may become frustrated. It's important to manage user expectations by providing an estimated processing time and suggesting alternative methods for faster processing, such as reducing the file size or using a different OCR system.
